

Mini-Lecture 2.6

Absolute Value Equations and Inequalities

Learning Objectives:

1. Solve absolute value equations.
2. Solve absolute value inequalities involving $<$ or \leq .
3. Solve absolute value inequalities involving $>$ or \geq .
4. Solve applied problems involving absolute value.

Preparing for Absolute Value Equations and Inequalities:

Evaluate each expression:

$$i) |-12| = 12 \quad ii) \left| \frac{0}{-10} \right| = |0| = 0 \quad iii) |0.4| = 0.4$$

EQUATIONS INVOLVING ABSOLUTE VALUE

If a is a positive real number and if u is any algebraic expression, then

$$|u| = a \quad \text{is equivalent to} \quad u = a \quad \text{or} \quad u = -a$$

Note: If $a = 0$, the equation $|u| = 0$ is equivalent to $u = 0$. If $a < 0$, the equation $|u| = a$ has no real solution.

Examples:

1. Solve each absolute value equation.

a) $|-2x - 5| = 9$

$$\begin{aligned} -2x - 5 &= 9 \quad \text{or} \quad -2x - 5 = -9 \\ -2x &= 14 \quad \quad \quad -2x &= -4 \\ \{x \mid x &= -7 \quad \text{or} \quad x = 2\} \end{aligned}$$

b) $3|4x + 1| - 2 = 10$

$$\frac{3|4x+1|}{3} = \frac{12}{3}$$

$$|4x+1| = 4$$

$$4x+1=4 \quad \text{or} \quad 4x+1=-4$$

$$4x=3 \quad \quad \quad 4x=-5$$

$$\{x \mid x = 3/4 \quad \text{or} \quad x = -5/4\}$$

EQUATIONS INVOLVING TWO ABSOLUTE VALUES

If u and v are any algebraic expression, then

$$|u| = |v| \text{ is equivalent to } u = v \text{ or } u = -v$$

c) $\left| \frac{2}{3}x - 9 \right| = |6x + 3|$

$$\frac{2}{3}x - 9 = 6x + 3 \text{ or } \frac{2}{3}x - 9 = -(6x + 3)$$

$$2x - 27 = 18x + 9 \text{ or } 2x - 27 = -3(6x + 3)$$

$$-16x = 36$$

$$2x - 27 = -18x - 9$$

$$20x = 18$$

$$\left\{ x \mid x = -\frac{9}{4} \text{ or } x = \frac{9}{10} \right\}$$

Equations with absolute values and inequalities:

If a is a positive real number and if u is an algebraic expression, then:

$$|u| < a \text{ is equivalent to } -a < u < a$$

$$|u| \leq a \text{ is equivalent to } -a \leq u \leq a$$

$$|u| > a \text{ is equivalent to } u < -a \text{ or } u > a$$

$$|u| \geq a \text{ is equivalent to } u \leq -a \text{ or } u \geq a$$

2. Solve each absolute value inequality. Graph the solution set on a real number line.

a) $|x + 5| > 2$

$$x + 5 < -2 \text{ or } x + 5 > 2$$

$$x < -7 \text{ or } x > -3$$

b) $|2x - 3| \leq 7$

$$2x - 3 \leq 7 \text{ and } 2x - 3 \geq -7 \iff -7 \leq 2x - 3 \leq 7$$

$$-\frac{4}{2} \leq \frac{2x}{2} \leq \frac{10}{2}$$

$$-2 \leq x \leq 5$$

c) $|-5x - 8| + 12 < 4$

$$|-5x - 8| < -8$$

d) $\frac{2|x + 12|}{2} \geq \frac{0}{2}$

$$|x + 12| \geq 0$$

$$(-\infty, \infty)$$
